SPEEDSCRIPT ®
smart writing system

Media Release

FOR IMMEDIATE RELEASE

Data security and a speedy entering of text on smartphone and tablet don't have to be mutually exclusive. The patented Swiss SpeedScript keyboard app offers a convenient and fast way to enter text without any entry being logged – delivering 100% data security.

Zurich, Dezember 10th, 2017–SpeedScript, a Swiss company, has been pioneering text entry on touch screen devices for more than 10 years. From the very beginning, SpeedScript has stayed away from using the autocomplete functionality with its complicating and confusing side effects. It rather focused on developing an efficient, yet simple to use, text entry logic, concentrating on ergonomic and linguistic optimization.

Autocorrect? Autocomplete? Server Connections? No Privacy? No thanks!
SpeedScript is a compact QWERTY-layout keyboard without the keys for vowels. It is using finger strokes to write vowels from any character key in one go. This patented combination of typing and writing makes it quicker, more efficient and intuitive. The design is clutter-free and allows users to write as quickly as if using ten-finger typing.

Apart from being efficient and easy to use, SpeedScript users do not have to cope with the sometimes less than helpful autocorrect and autocomplete functionalities of their device. By concentrating entirely on ergonomic and linguistic optimization, SpeedScript helps avoid any data security and privacy issue coming with the use of cloud services - neither are any data entries being logged nor are they being sent to external servers for processing and saving them.

The paid SpeedScript app does not need any permissions to access the internet. It is locally installed on the device, be it smartphone or tablet. The free SpeedScript version accesses advertising networks and requires acceptance of carefully delimited permissions, but it does not read or store any information

Anyone who seeks to protect their privacy will find SpeedScript to be their perfect text entry tool.

SpeedScript is the alternative to autocomplete functionalities for all those seek an intuitive, fast and convenient way to enter text – without risk to the security of their data.

SpeedScript is available in two versions on the Google Play Store: The free app with full functionality is ad-supported and the paid app without advertising is available at a price of CHF 3.99/EUR 2.99/GBP 2.39.

SpeedScript AG: the company
From the moment founder Raphael Bachmann bought an Apple Newton back in the nineties, he was intrigued by the challenge of finding quick and easy ways of writing with a touchscreen device. In 2000 this mission prompted him to assemble a team of developers and launch his own company. SpeedScript AG has subsequently become a pioneer in linguistic research as the basis for developing text input methods – most notably SpeedScript for Windows Mobile. SpeedScript is patented internationally.
